DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 11-16, drawn to a method of making a particle separation device, classified in class 209, subclass 127.1.
- II. Claims 21-33, drawn to two methods for separating charged particles using electric field gradients, classified in class 204, subclass 450.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are directed to related processes. The related inventions are distinct if the inventions as claimed do not overlap in scope, i.e., are mutually exclusive; the inventions as claimed are not obvious variants; and the inventions as claimed are either not capable of use together or can have a materially different design, mode of operation, function, or effect. See MPEP § 806.05(j). Here, the method of group I claims *forming* various particle separating channels while the method of group II claims *applying electric field gradients* to particles to transfer charged particles through sieving media, thus the respective claim groupings can not be regarded as overlapping in scope or being obvious variants. For example, Ramsey as previously cited teaches the various forming and placement of electrode steps, but does not, according to Applicant, teach the electric field gradient steps. Thus, the claim groupings are clearly not coextensive in claim scope. Ramsey further demonstrates that the structure claimed in group I can have a materially different function than the process claimed in group II.

Because these inventions are independent or distinct for the reasons given above and the inventions require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.
